

## Using genetic markers to infer speciation events in *Melanoplus* grasshoppers

**Wanted:** Undergraduate researchers to assist with the development of molecular markers which will be used to investigate speciation in *Melanoplus* grasshoppers. You will learn basic molecular biology methods (DNA extraction, PCR, sequencing & cloning techniques) which can be applied to a wide variety of medical and biological research. Research will be conducted in the lab of Dr. Lacey Knowles. Qualifications include an interest in evolutionary biology and the desire to learn molecular techniques. Please e-mail Bryan [bcarsten@umich.edu](mailto:bcarsten@umich.edu) for more information.
